PROFESSIONAL SUMMARY

An innovative and skilled Software Developer and Frontend Engineer with experience building scalable web applications, AI-powered workflows, and responsive user interfaces using modern JavaScript technologies. Proficient in React, TypeScript, Firebase, and REST API integration, with expertise in real-time data synchronization, state management, and secure application architecture. Demonstrated success developing intelligent financial platforms, peer-to-peer skill exchange platform with real-time request workflows, and document parsing solutions that improve performance, usability, and data accuracy. Skilled in integrating LLM-powered features, optimizing frontend performance, and delivering reliable serverless applications with strong testing and version control practices. Passionate about creating secure, user-focused digital products through clean code, collaboration, and continuous learning.

SKILLS

- Communication Skills
 - Responsive UI Development
 - Route Guard Implementation
 - Version Control (Git/GitHub)
 - Client-Side Document Parsing
 - Presentation & Report Writing
 - Data Isolation & Security Rules
 - Cross-Functional Collaboration
- Unit Testing
 - Prompt Engineering
 - REST API Integration
 - Build Tool Configuration
 - Performance Optimization
 - LLM-Driven Orchestration
 - State Transition Enforcement
 - Cross-Browser Compatibility
- Application Development
 - Complex State Management
 - Serverless Function Deployment
 - Real-Time Data Synchronization
 - AI-Powered Workflow Integration
 - Financial Signal Ranking & Filtering
 - Real-Time Messaging Implementation
 - Deterministic Financial Engine Integration

TOOLS: Google Workspace | Slack | Jira | Teams | React.js | TypeScript | JavaScript (ES6+) | HTML5 | CSS3 | Tailwind CSS | Framer Motion | Zustand | Context API | Firebase (Auth, Firestore) | Express.js | Vercel Serverless Functions | OpenAI API | Chart.js | PDF.js | Mammoth.js | Vitest | Jest | Vite | Chrome DevTools | Git | GitHub | REST APIs | Postman

WORK EXPERIENCE

Software Developer/ Frontend Engineer

January 2024 – Present

FREELANCER

- Optimized an LLM orchestration framework, reducing redundant financial alerts by 58%.
- Secured user data through Firestore access policies, achieving 100% account isolation.
- Structured skill exchange workflows with controlled state transitions, safeguarding transaction integrity.
- Instituted route protection mechanisms, preventing unauthorized progression between application stages.
- Enhanced API-driven job matching by standardizing résumé data, improving matching accuracy by 35%.
- Automated résumé extraction using PDF.js and Mammoth.js, increasing document processing efficiency by 47%.
- Devised deterministic financial engines integrated with AI services, ensuring reliable, explainable analytical outcomes.
- Developed real-time messaging with Firestore listeners, preserving synchronized conversations across concurrent users.
- Engineered responsive financial interfaces with React, Zustand, and Firebase, improving real-time synchronization speed by 42%.

EDUCATION

Independent Tech Intensive / Udemy

Full-Stack Web Development Certification

June 2025

Ekiti State University, Nigeria.

Bachelor of Arts, History and International Studies

January 2024

PROJECTS

- **SmartBudget:** A real-time responsive financial platform.
- **SkillForge:** A peer-to-peer skill exchange platform with real-time request workflows.
- **SkillSync:** A client-side document parsing pipeline using PDF.js and Mammoth.js

INTERESTS

I find satisfaction in reading, researching emerging frontend technologies, engaging with developer communities, and contributing to strategic conversations around user experience, performance, and scalable architecture.
